About the Project

This comprehensive mobile application is designed to train healthcare workers, counselors, and community volunteers in suicide assessment and prevention using evidence-based methodologies. The app combines interactive learning with practical skill development to enhance suicide intervention capabilities. Key features include multi-language support (English, Kannada, Hindi), pre/post-test assessments, and 15 interactive

case-based scenarios with animated storytelling and feedback. The training follows the RPSID Model covering Risk factors, Protective factors, Suicidal inquiry, Intervention, and Documentation, supported by animated video modules and step-by-step assessment form guidance.

Beyond clinical training, the app emphasizes holistic wellness through guided coping strategies, mindfulness resources including guided yoga and meditation, progressive muscle relaxation techniques, and inspirational content featuring Buddha's teachings on mental wellness. Users learn to recognize 12 critical warning signs through engaging animated presentations while accessing emergency contact integration with 24/7 crisis helplines. The application targets healthcare professionals, mental health workers, counselors, social workers, and trained volunteers involved in suicide prevention and mental health support.

The expected outcomes include enhanced competency in suicide risk assessment, improved intervention skills, standardized documentation practices, and ultimately, reduced suicide rates through better-trained healthcare personnel and support networks. This user-friendly platform ensures accessibility across different technical skill levels while maintaining comprehensive coverage of both clinical expertise and personal wellness strategies essential for those working in suicide prevention.

Feature checklist

Feature	Implementation Status
1. Language Selection (en, kn, hi)	Completed(major parts translated, need verification and feedback)

2. User Registration & Baseline Data Collection	Completed
3. Pretest (Initial Knowledge Assessment)	Completed
4. Case-Based Scenarios 1. Scenario based Q&A 2. Additional Content 3. User progress tracking 4. 7 warning signs of suicide 5. Animated videos	complete 1. complete 2. complete 3. complete 4. complete 5. complete(feature discarded by client)
5. Suicide Assessment Form Teaching and model teaching with video: 1. RPSID Assesment Q&A 2. Text Report generation based on Q&A 3. Training videos	complete 1. Complete 2. Complete 3. Complete
6. Guided Coping Strategies: 1. Yoga, Meditation, 2. life lessons 3. Mental Imagery and thought stoppage	Feature Discarded by client

7. Daily mood check-ins 1. Scheduled Notifications 2. user progress monitoring 3. Notification settings 4. Trigger Based Alerts	Complete 1. Complete 2. Complete 3. Complete 4. Complete
8. Emergency Contact Screen	Complete
9. AI based pattern Recognition	feature discarded by client
10. Trainee Analytics(for Trainers)	Complete
11. Trainee Dashboard	Complete
12. Logo integration	Complete

Architecture Overview

DIMHANS Sahaay is a Flutter-based mental wellness application designed for mood tracking and therapeutic support. The app serves two distinct user types - trainers (therapists/counselors) and trainees (patients) - with role-based authentication and personalized experiences.

Authentication & Data Layer: Uses Google Sheets as the backend via Google Sheets Service for user management, mood tracking data, and session records. The

AuthViewmodel handles login state management for both user types with persistent authentication.

Notification System: Implements a robust background notification service using flutter_local_notifications and work manager to deliver mood check-in reminders even when the app is terminated, with customizable frequency settings.

User Interface: Features role-specific screens including mood tracking interfaces, pretest assessments, and notification settings. Uses Material Design with a teal theme and responsive layouts optimized for both user types.

Background Processing: Employs WorkManager for reliable background task execution, ensuring mood tracking reminders are delivered consistently regardless of app state, with automatic rescheduling and battery optimization handling.

Internationalization: Uses flutter_localizations and intl for multi-language support with localized content and date formatting.

Issues

1. Animated videos for Case scenarios - Resolved (Feature discarded by client)
2. Videos for RPSID training module - Resolved
3. Unclear instruction on AI based pattern recognition -

Resolved(Feature discarded)
